14.01-1 Protection of agricultural land

31/03/2017
VC134

Objective

To protect productive farmland which is of strategic significance in the local or regional context.

Strategies

Ensure that the State's agricultural base is protected from the unplanned loss of productive agricultural land due to permanent changes of land use.

Prevent inappropriately dispersed urban activities in rural areas.

Limit new housing development in rural areas, including:

- Directing housing growth into existing settlements.
- Discouraging development of isolated small lots in the rural zones from use for single dwellings, rural living or other incompatible uses.
- Encouraging consolidation of existing isolated small lots in rural zones.

Consult with the Department of Economic Development, Jobs, Transport and Resources and utilise available information to identify areas of productive agricultural land.

Take into consideration regional, state and local, issues and characteristics in the assessment of agricultural quality and productivity.

Permanent removal of productive agricultural land from the State's agricultural base must not be undertaken without consideration of its economic importance for the agricultural production and processing sectors.

In considering a proposal to subdivide or develop agricultural land, the following factors must be considered:

- The desirability and impacts of removing the land from primary production, given its agricultural productivity.
- The impacts of the proposed subdivision or development on the continuation of primary production on adjacent land, with particular regard to land values and to the viability of infrastructure for such production.
- The compatibility between the proposed or likely development and the existing uses of the surrounding land.
- Assessment of the land capability.

Subdivision of productive agricultural land should not detract from the long-term productive capacity of the land.

Where inappropriate subdivisions exist on productive agricultural land, priority should be given by planning authorities to their re-structure.

In assessing rural development proposals, planning and responsible authorities must balance the potential off-site effects of rural land use proposals (such as degradation of soil or water quality and land salinisation) which might affect productive agricultural land against the benefits of the proposals.

Planning for rural land use should consider:

- land capability; and
- the potential impacts of land use and development on the spread of plant and animal pests from areas of known infestation into agricultural areas.

14.01-2 Sustainable agricultural land use

29/10/2015
VC101

Objective

To encourage sustainable agricultural land use.

Strategies

Ensure agricultural and productive rural land use activities are managed to maintain the long-term sustainable use and management of existing natural resources.

Encourage sustainable agricultural and associated rural land use and support and assist the development of innovative approaches to sustainable practices.

Support effective agricultural production and processing infrastructure, rural industry and farm-related retailing and assist genuine farming enterprises to adjust flexibly to market changes.

Facilitate the establishment and expansion of cattle feedlots, piggeries, poultry farms and other intensive animal industries in a manner consistent with orderly and proper planning and protection of the environment.

Policy guidelines

Planning must consider as relevant:

- *Victorian Code for Cattle Feedlots* (Department of Agriculture, Energy and Minerals, 1995), in considering proposals for use and development of beef cattle feedlots.
- *Victorian Code for Broiler Farms* (Department of Primary Industries, 2009), in considering proposals for use and development of broiler farms.
- *Code of Practice: Piggeries* (Health Commission of Victoria and Department of Food and Agriculture, 1992), in considering proposals for use and development of piggeries.
- *Apiary Code of Practice* (May 2011) and any relevant scientific reports, in considering proposals for apiculture.
- *Planning Guidelines for Land Based Aquaculture in Victoria* (Department of Primary Industries, No. 21, September 2005), in considering proposals for land based aquaculture facilities.

14.01-3 Forestry and timber production

29/10/2015
VC101

Objective

To facilitate the establishment, management and harvesting of plantations, and harvesting of timber from native forests.

Strategies

Promote the establishment of softwood and hardwood plantations on predominantly cleared land as well as other areas subject to or contributing to land and water degradation.

Identify areas which may be suitably used and developed for plantation timber production.

Ensure protection of water quality and soil.

Ensure timber production in native forests is conducted in a sustainable manner.

Timber production (except agroforestry, windbreaks and commercial plantations of 5 hectares or less) is to be conducted in accordance with the *Code of Practice for Timber Production* (Department of Environment and Primary Industries, 2014).

Ensuring Victoria's greenhouse sinks are protected and enhanced by controlling land clearing, containing the growth of urban areas and supporting revegetation programs.

Policy guidelines

Planning must consider as relevant:

- *Code of Practice for Timber Production* (Department of Environment and Primary Industries, 2014).
